

Advanced Cloud Operations

A new category of managed services, powered by Parallo. Engineering-led, advisory-backed, and built for enterprises that are evolving.

Advanced Automation

Multi-Cloud - Azure & AWS

Designed for AI Adoption

Security & Compliance

Traditional managed services keep the lights on. We're build for organisations in motion.

Shifting from infrastructure to platforms, enabling organisations to build software, instrument for reliability, and adopt AI. We pair an engineering-led delivery capability with a senior advisory team, so your cloud platform is not just maintained, it is optimised, governed, and continuously improved. From economics and architecture through to security, risk, and day-to-day run, we help every stakeholder get more value out of cloud and AI.

Where transforming enterprises need us:

/ 01

Move IaaS to PaaS

Deep expertise across Kubernetes, serverless, managed data and AI services on Azure and AWS.

/ 02

Build & Ship Apps

We design for modern app engineering, built for scalability and fast, reliable deployment with minimal downtime.

/ 03

Stand up SRE

Reliability as a discipline: SLOs, instrumentation, observability, and incident response.

/ 04

Adopt AI, Safely

Land AI on a cloud platform that is optimised, governed and genuinely well managed.

More than a Delivery Centre:

WE ADVISE

Strategy that decides the right moves

A capable advisory team which has governed complex programs of work adopting AI and modern cloud. We understand cloud economics and architecture, governance and operating models, security and risk. We help you build stakeholder engagement to get transformation funded and delivered.

WE OPERATE

Engineering that makes them real

A specialist Cloud & AI engineering team that builds, migrates, and runs your platform, so it works the way it should every day. We help with automation, reliability, security, and proactive guidance, delivered in the context of your business and what it needs.

Build it. Run it. Improve it.

Advanced Cloud Operations

A Modern Application Stack. Operated with You and Built Around Your Goals.

From cloud foundation to the AI embedded in your apps, we bring modern methods and a deep understanding of how application and platform layers are built and how they interact. We advise across application and user experience, so every layer is observed, secured and optimised around your goals.

Tools show you what's happening. We help you understand what it means, and when to act.

	User Experience. Web app & mobile · user journeys & UX	ADVISE
	AI & Intelligence. AI observability	ADVISE
	Application & Code. Microservices · APIs · modern code · event-driven integration	ADVISE
	Runtime & Compute. Kubernetes & containers · serverless · VMs · operating systems	MANAGE / ADVISE
	Data & databases. Managed SQL & NoSQL · caching · streaming & pipelines · storage	MANAGE / ADVISE
	Cloud platforms & Paas AWS & Azure · networking · identity · managed platform services	MANAGE / ADVISE
	Build & Deployment Automation. CI/CD - Iac (Terraform, ARM, BICEP) - GitHub & Azure DevOps	PROVISIONS & DEPLOYS EVERY LAYER

Operated across every layer

-  **OBSERVABILITY & APM**
End-to-end telemetry & tracing.
-  **SECURITY & COMPLIANCE**
Identity, posture & guardrails.
-  **PERFORMANCE & COST**
Tuning, scaling & FinOps.
-  **24x7 SRE & AUTOMATION**
Runbooks, alerting, self-healing.

Compliance: ISO 27001 · SOC 2 Type 2 · IRAP · PCI // **Independent and built for your platform of choice:** Microsoft Azure · AWS · Multicloud // **Verticals:** FSI · Health · Public Sector · Education · Manufacturing · Tourism

Build it. Run it. Improve it.
